Customer Reviews

In short it's a terrible book. It first offers no explanation to the data contained. It's more of a generic copy and paste type thing. The author seems to do a lot of similar books which leads me to believe that quantity in this case does not produce quality. The test itself doesn't seem to fit anywhere. It's too complicated to be an entry level test for an electrical apprentice. The NJATC (National Joint Apprenticeship and Training Committee) seems to rely more on a reading comprehension and mathematical aptitude test. It's also not complicated enough to be a journey man test for those who have finished the apprenticeship program. For example it offers no section on blue print reading that seems to me to be a key journey man test construct. So in turn my final conclusions are that this book needs some serious work and I would love to hear the exact placement for this test in apprenticeship dogma. Also the kicker is that there is an answer sheet in the back of the book to actually take the test that doesn't have enough numbers to do the test. I ended up writing my answers on notebook paper....

the aptitude test was algebra and reading comprehension this book has neither of those things in it. He has done no research to see what is on the aptitude test. all he did was make a good title and throw in facts about electricity in the book. This is a complete waste of time for any one that wants to study for the electrical aptitude test. If you are planning on taking the aptitude test to become a electrical apprentice There is a Tech math course offered by the University of Tennessee online

chapters 9 and 10 had everything that was on the algebra part of the test. The book is called building a foundation in mathematics.

It is a very good book to review your weaknesses before a test. A lot of information get it a month or longer so that you can practice. It has many tests to gauge your knowledge.

Was not informational about any parts of the test. Pages were replaced. 3/4ths of the book is test questions that aren't even pertaining to electricians but engineering
